

F3-STATIC-INDEX-SENTINEL

Deterministic multi-page static site fixture for the Sprint F.3 website-to-pdf byte-identity tests. This page must render identically on every run: no scripts, no external resources, no dates, no randomness.

Conversion engine

Files are processed through the API gateway and rendered by a single shared Chromium instance. Every discovered page becomes one render call through the singleton.

Discovery

URL discovery walks robots.txt, sitemaps, and same-domain links in breadth-first order, deduplicating normalized URLs along the way.
